50.0021.05: 5 ml

BATCH

Batch Number	Production Date	Species	Origin
20220928-500021	2022-09-28	Rabbit	Germany, Europe

PRODUCTION

Blood from New Zealand White Rabbits with mixed sex is collected and pooled. Whole blood is clotted with Davids proprietary protocol to reduce hemolysis. The serum is separated from the clot by centrifugation. The serum can be used in applications like flow cytometry, Immuno-Histo-Chemistry (IHC), Immunoprecipitation (IP) or as a blocking and control serum. Furthermore, the serum can be used as additive for buffers or agar. When you need a sterile filtered batch without preservation, please ask our staff.

INFORMATION

Preservation	0.02% Na-Azide
Storage Condition	2 - 8°C for short term storage or -20°C for long term storage
Working Conditions	Avoid freezing-thawing cycles
The product has a shelf life of 3 years when stored correctly.
