### - 1 - Introduction

Solid rabbit phospholipids are made from rabbit phospholipids. Phospholipids serve as essential building components of cell membranes and are involved in many biological processes. The phospholipids are in a solid state, making them easier to handle and store. They have a wide range of uses and are frequently utilized in the pharmaceutical and cosmetic industries. They are used there as active ingredient transporters and stabilizers, among other things. On the other hand, their hydrating characteristics allow for a wide range of applications in industry.

#### Information

Cat.No.	50.0055.01 (1 g)
	50.0055.05 (5 g)
Inorganic Phosphorus Title	28.7 mg/g
Storage Conditions	-20°C

### - 2 - Information

#### Handling

Storage Conditions	-20°C
--------------------	-------

The product has an expiration date of 12 months at -20°C. In many cases the product is stable for years.
